

## Mud Tank/Rig Tank/Open Top Tank

We are proud to release its new Tank gauging system designed for an open top tank.

This system offers a bolt on/weld on option and has a magnetic mounted float cable guide kit.

The gauge board is customized to the tanks dimension and can be offered in cubic meters or Barrels.

The gauge board easily folded down for transportation of the tank and then once on site it can be easily stood up on the top of the tank making it highly visible to everyone on the site.

No more looking around stairs, suction hoses and return lines. No need to leave the pump controls to see the gauge board making for a safer operation.
